# DRAFT - WhatsApp message template for Meta approval (utility category)

Status: DRAFT only. Nothing was submitted to Meta or to the WhatsApp provider. The owner (or the lead with the owner's word) submits.

## 1. What exists in the product (source of truth)

The fixed, code-owned entry-code message for a person who received access to a site: `smplwise_vms/backend/smplwise/services/access_grants.py`, dict `TEMPLATES` (he / en / ar / ru; named variables `{code} {doors} {dates} {hours} {ref}`; sender name `CODE_MESSAGE_SENDER` = "SmplWise Arx"; the closing contact sentence can name the organisation via `NOTICE_CONTACT`). The ar and ru texts there are flagged in the repo as needing a native review. Related fixed texts built the same way: the vendor portal sign-in code (`portal_code`, in `services/tickets/message_templates.py` `FIXED_STARTERS`) and the consent request (`services/intercom_consent.py`).

Caveat from the repo: at the integ/270 review (C1) the WhatsApp adapter could not forward a WhatsApp Business template (flag near line 555 of `routers/access_control_messaging.py`). Template sending is not live until that adapter work and this approval are done.

Chosen for approval: ONE template, the entry-code / access notice. It follows a request the recipient is part of, has no marketing, no link and no account credential. The two sign-in / verification code messages are one-time passcodes and would fall under Meta's AUTHENTICATION category with its own fixed format; they are not submitted as utility.

## 2. Template identity

| Field | Value |
|---|---|
| Name | `site_access_code` |
| Category | UTILITY (not marketing, not authentication) |
| Languages | he, en, ar, ru (one template name, four translations) |
| Header / footer / buttons | none |
| Variable format | positional {{1}} to {{5}}, mapped from the product's named variables below |

## 3. Variables and examples

| Meta variable | Product name | Meaning | Example value (fictitious) |
|---|---|---|---|
| {{1}} | `{code}` | personal entry code, digits | 482915 |
| {{2}} | `{doors}` | door names, comma separated | Main gate, Parking B |
| {{3}} | `{dates}` | validity dates | 22.10.2026 - 24.10.2026 |
| {{4}} | `{hours}` | hours phrase built by the product per language | 08:00-17:00 |
| {{5}} | `{ref}` | reference number of the request | R-10442 |

Meta rules respected: no variable at the very start or very end of the body, no two variables adjacent, no newline or tab inside a value, variables numbered in order, the same variable count in every language.

## 4. Body text per language

English

```
SmplWise Arx: your personal entry code is {{1}}. Doors: {{2}}. Valid {{3}}, {{4}}. The code is personal - do not pass it on. Entries are recorded (name, time and door) for security only; questions: the building manager. Reference {{5}}.
```

Hebrew

```
SmplWise Arx: קוד הכניסה האישי שלך הוא {{1}}. דלתות: {{2}}. בתוקף {{3}}, {{4}}. הקוד אישי - אל תעביר אותו לאיש. הכניסות נרשמות (שם, שעה ודלת) לצורכי אבטחה בלבד; לשאלות: מנהל המבנה. אסמכתא {{5}}.
```

Arabic (first translation, needs native review)

```
رمز الدخول الشخصي الخاص بك من SmplWise Arx. {{4}}، {{3}}: مدة الصلاحية. {{2}}: الأبواب: {{1}}. هو الرمز شخصي - يُرجى عدم مشاركته مع أي شخص. تُسجَّل عمليات الدخول (الاسم والوقت والباب) لأغراض أمنية فقط؛ للاستفسار: مدير المبنى. الرقم المرجعي: {{5}}.
```

Russian (first translation, needs native review)

```
SmplWise Arx: ваш личный код входа — {{1}}. Двери: {{2}}. Действует: {{3}}, {{4}}. Код личный — никому его не передавайте. Входы регистрируются (имя, время и дверь) только в целях безопасности; по вопросам обращайтесь к управляющему зданием. Справочный номер: {{5}}.
```

Note: the product can replace "the building manager" with the organisation name from the privacy settings. A fixed template cannot. Either keep the neutral "building manager" wording (as drafted, recommended) or add a sixth variable for the organisation placed mid-sentence, not at the end.

## 5. Sample use (for the Meta review form)

"Sent once to a person (technician, contractor) after a building manager approves a time-limited access request for that person. It gives the personal entry code, the doors and the validity period. Sent only to the number the person registered and confirmed, and only after the person consented to WhatsApp messages (opt-in by link). Not promotional."

## 6. Submission checklist

- [ ] Business verification of the WhatsApp Business Account is complete and the display name is approved.
- [ ] The sending number is registered with the provider the add-on uses, and the provider accepts template sends (caveat in section 1).
- [ ] Opt-in evidence documented: the consent-by-link flow and its stored record.
- [ ] Category Utility. Prepare an appeal text in case Meta recategorizes to Marketing: transactional, requested by the user's own access request, no offer.
- [ ] Four languages submitted as translations of ONE template name; Hebrew/English reviewed, Arabic/Russian flagged for native review before go-live.
- [ ] Example values entered for every variable exactly as in section 3 (fictitious; no real codes or doors).
- [ ] No URL, no phone number, no personal names in the body.
- [ ] After approval: record the template name and language codes (he, en, ar, ru) in the product configuration; test-send to the owner's own number only.
- [ ] Legal pass on the privacy sentence ("entries are recorded...") together with the technician notice (PRIVTEXT).
- [ ] Watch the quality rating for the first week; pause the template if complaints rise.
